Education

Western University *Expected Graduation:*
Bachelor of Engineering Science (B.E.Sc), Software Engineering *April 2028*

Experience

FAYBL *Software Engineer, Founding Team* *June 2026 – Present*

- Build features for a React Native / Expo audio-fitness app (TypeScript, Supabase) in which narrative audio advances only while the user is physically moving
- Implemented run route mapping with the Mapbox SDK and a run-history screen with a hand-rolled SVG trend chart and metric/imperial unit conversion
- Led a home screen redesign: restructured the tab bar, introduced a Library tab, and built genre-based content rows
- Redesigned the onboarding flow and added app-wide haptic feedback; ship through PR review with cofounders on a Linear ticket workflow

Costco *Merchandiser* *July 2024 – Present*

- Maintain inventory availability and presentation standards in a high-volume retail environment; support members and cashiers through peak hours

Projects

Timbi — Campus Free-Food Discovery Platform *timbi.app*

- Designed, built, and deployed a full-stack platform (Next.js App Router, TypeScript, Tailwind CSS, Supabase, Clerk, Vercel) that aggregates free-food events across Western's campus into one searchable interface
- Automated data collection with two scrapers on GitHub Actions — a Playwright Instagram pipeline and a Node client for Western's events feed — backed by Postgres tables for deduplication and run-health monitoring, with row-level security and partial unique indexes
- Engineered a submission moderation pipeline chaining date validation, per-user rate limiting, a gibberish prefilter, and OpenAI content checks, with double-submit protection
- Built a synced list/map interface using Leaflet and CARTO tiles, including a searchable 40-building location dropdown with alias matching before AI geocoding fallback
- Debugged and resolved production issues independently, including a floating-point precision bug in map fly-to transitions and an iOS LAN-access bundling failure

Healthcare App — Western Developer Society *github*

- Developed React Native frontend features for a healthcare platform, collaborating via feature branches, pull requests, and merge conflict resolution
- Implemented tag-based filtering, calendar views, and timeline-based health tracking to organize patient events and visit summaries

Game Development — Web, Unity & Roblox *kittyxcarson.xyz*

- Built *Kitty Carson*, a 2D survival game in JavaScript (Phaser.js) with physics-based movement, enemy AI, and progression systems; deployed to a custom domain with responsive, cross-platform support
- Built *SoulSeek*, a 2D Unity/C# game with combat, exploration, XP progression, and UI systems for menus and dialogue
- Developed Roblox experiences in Lua with custom gameplay and UI; one surpassed 40,000 visits

Technical Skills

Languages: TypeScript, JavaScript, Java, C#, SQL, Lua, HTML/CSS

Frameworks & Libraries: React, Next.js, React Native, Expo, Node.js, Tailwind CSS, Leaflet, Mapbox, Unity

Tools & Platforms: Git, GitHub Actions, Supabase, PostgreSQL, Clerk, Playwright, Vercel, IntelliJ IDEA
